

Norwegian Petroleum Society (NPF)

Biennial Geophysical Seminar

The three challenges of the oil & gas industry
9 - 11 March 2020

The Norwegian Petroleum Society is organising its geophysical seminar in Oslo the 9th – 11th of March 2020. The biennial seminar is a popular networking area where recent achievements, changes and new developments in geophysical techniques is presented.

With rising global demand, highly volatile prices and increasingly stringent environmental regulations, the oil and gas industry faces three major challenges: 1. optimising the performance of its base assets, 2. maintaining cost efficiency, and 3. improving its environmental footprint.

The industry has already been through a tough several years of drastic cost-cutting and re-structuring, but is now more vigorous and adaptive and more resilient to a rapidly changing world than ever. To meet the increasingly difficult task of finding and producing more hydrocarbons we should both learn from past experience as well as trying new technologies and methods.

The biennial geophysical conference is the most traditional of all the geophysical events in Norway and has been organised since 1975. The Norwegian Petroleum society and the programme committee is pleased to invite you to two days of interesting talks and fruitful network building at Quality Hotel Expo in Oslo.

For more information please visit [NPF's website](#)

Special Offer for Young Professionals:

Bring a colleague under 30 for half price! Participant no. 2 or more under the age of 30 from the same employer receives a 50% discount on the conference fee. Contact the project manager tonje.raknes@npf.no for registration.

Early-bird offer:

Register before 9th of January to take advantage of the early-bird.

On behalf of the Organising Committee I would like to welcome you to the seminar.

Vetle Vinje,
Chairman of the Organising Committee
